Top of the Line! Twin 10" Woofers

299⁹⁵ Each

- 6½" Midrange Speaker
- 2" Edgeless Tweeter With Horn Assembly

Realistic® Optimus T-200. Our best sounding speaker ever, the "200" is skillfully crafted to deliver a flat, uncolored frequency response with high or moderate powered amplifiers. The two active woofers move only half the distance of a single-woofer system, boosting efficiency and lowering distortion and cone break-up. Gradual-slope crossovers improve power handling capacity and ensure smooth transitions in bass-midrange-treble response. Keeping in tune with the latest time-alignment technology, we've staggered the tweeter so there are no sudden phase shifts or discontinuities in the measured phase response. And T-200's look great anywhere in a room because they're finished on 5 sides in genuine oiled walnut veneer.

40-2029 299.95

SPECIFICATIONS. Response: 50-20,000 Hz. System Sensitivity: 90 dB (SPL at 1 meter/1 watt). Controls: Variable midrange and treble. Power Handling Capacity: 150 watts. Impedance: 8 ohms. Size: 88x32x32 cm.

The T-100 is so efficient you'll get the maximum out of any hi-fi amplifier for room-filling volume with minimum wattage. An L-Pad control lets you match the treble response to the acoustics of your listening room and to your personal taste. And like the T-200, the "Tower" has real style—it's finished in oiled walnut veneer on all sides so it looks just great even if not placed against a wall. The input connections are recessed so even the speaker cables remain hidden. **40-2025 . . . 219.95**

Tweeters for Extended Treble

Dynamic Tweeters. Designed to deliver impressive highs and superior stereo imaging that add greater listening enjoyment to your present system or to custom built systems. Choose from a variety for every application. Figures A through F are dynamic tweeters. 8 ohms impedance.

Piezo Tweeters. Ideal for high performance systems. They use a solid state driver element in place of a voice coil and magnet for lower mass and increased efficiency. This improves transient response so you hear clearer highs with a minimum of "ringing." Piezo tweeters are virtually burnout-proof and do not require a crossover.
